

Web Accessibility Checklist for Drupal Websites

This checklist is for websites hosted on the University's Drupal web platform (www.calstatela.edu). It will assist you in making certain your web content is accessible to everyone. For information on how to fix web accessibility issues, please visit the [Web Accessibility Guidelines](#) page.

Images

- All images have alternative text.
- There is no information which is only available in an image.
- The alternative text is not made redundant with a caption.

Color

- There is a contrast ratio of at least 4.5:1 between the foreground and background.
- Color is not used as the sole means of conveying information.

Links

- All link text is descriptive.
- All links with the same text share the same URL.

Headings

- Headings are used in a logical hierarchy.

Tables

- Tables make proper use of headings.
- Tables have a caption or summary.

Form

- All form items are in a logical and intuitive order.
- All form items are using the correct type.

Frames

- All frames have a title attribute and content description.
- Scrolling is allowed.
